

## ANTIDERIVATIVES AND INTEGRALS

A function  $F$  is called an **antiderivative** of a function  $f$  on a given interval if  $F'(x) = f(x)$  for all  $x$  in that interval.

The process of finding antiderivatives is called **antidifferentiation** or **integration**.

If some function  $F$  exists such that  $\frac{d}{dx}[F(x)] = f(x)$  then the functions of the form  $F(x) + C$  are antiderivatives of  $f(x)$ .

Mathematically:  $\int f(x)dx = F(x) + C$  which is read,  
“the **indefinite integral** of  $f(x)$  equals  $F(x)$  plus  $C$ .”

**Indefinite Integral** means “generic” function

$\int$  is the **integral sign**

$f(x)$  is the **integrand**

$C$  is the **constant of integration**

The  $dx$  symbol identifies the **independent variable**

Formulas:

### DIFFERENTIATION

### INTEGRATION

$$\frac{d}{dx}[x] = 1$$

$$\int 1 dx = x + C$$

$$\frac{d}{dx}\left[\frac{x^{r+1}}{r+1}\right] = x^r \quad (r \neq -1)$$

$$\int x^r dx = \frac{x^{r+1}}{r+1} + C$$

$$\frac{d}{dx}[\sin x] = \cos x$$

$$\int \cos x dx = \sin x + C$$

$$\frac{d}{dx}[-\cos x] = \sin x$$

$$\int \sin x dx = -\cos x + C$$

$$\frac{d}{dx}[\tan x] = \sec^2 x$$

$$\int \sec^2 x dx = \tan x + C$$

$$\frac{d}{dx}[-\cot x] = \csc^2 x$$

$$\int \csc^2 x dx = -\cot x + C$$

$$\frac{d}{dx}[\sec x] = \sec x \tan x$$

$$\int \sec x \tan x dx = \sec x + C$$

$$\frac{d}{dx}[-\csc x] = \csc x \cot x$$

$$\int \csc x \cot x dx = -\csc x + C$$

## ANTIDERIVATIVES AND INTEGRALS

Formulas:

**DIFFERENTIATION****INTEGRATION**

$$\frac{d}{dx}[e^x] = e^x$$

$$\int e^x dx = e^x + C$$

$$\frac{d}{dx}[e^{-x}] = -e^{-x}$$

$$\int e^{-x} dx = -e^{-x} + C$$

$$\frac{d}{dx}\left[\frac{1}{\ln b} \cdot b^x\right] = b^x$$

$$\int b^x dx = \frac{b^x}{\ln b} + C, \quad b > 0, b \neq 1$$

$$\frac{d}{dx}[\ln|x|] = \frac{1}{x}$$

$$\int \frac{1}{x} dx = \ln|x| + C$$

$$\frac{d}{dx}[\tan^{-1} x] = \frac{1}{1+x^2}$$

$$\int \frac{1}{1+x^2} dx = \tan^{-1} x + C$$

$$\frac{d}{dx}[\sin^{-1} x] = \frac{1}{\sqrt{1-x^2}}$$

$$\int \frac{1}{\sqrt{1-x^2}} dx = \sin^{-1} x + C$$

$$\frac{d}{dx}[\sec^{-1}|x|] = \frac{1}{x\sqrt{x^2-1}}$$

$$\int \frac{1}{x\sqrt{x^2-1}} dx = \sec^{-1}|x| + C$$

Properties of the Indefinite Integral

- Differentiating an antiderivative of  $f(x)$  results in  $f(x)$ .

$$\frac{d}{dx}\left[\int f(x) dx\right] = f(x)$$

- A constant factor can be moved through an integral sign.

$$\int c \cdot f(x) dx = c \int f(x) dx$$

- The antiderivative of a sum or difference is the sum or difference of the antiderivatives.

$$\int [f(x) \pm g(x)] dx = \int f(x) dx \pm \int g(x) dx$$
